

Learn to read your money.

A playable approach to financial literacy from Casey S. Rettke, a New Hampshire creator with mortgage-lending and community housing-education experience.

Vi\$ion makes a financial picture visible through four corners. Start by understanding where you stand. Then practice a decision with fictional money and see what changes.

CASH FLOW

What comes in. What goes out. What remains.

CAPITAL

Accessible reserves that protect you when a cost arrives.

COLLATERAL

What you own, what it may be worth, and the debt and costs attached.

CREDIT

The borrowing record lenders read. Understand the terms and communicate.

Level 1: Read your current four corners and decide from the facts.

Level 2: Learn how the four corners affect one another.

Read. Allocate. Predict. Play. Review.

In Debtbreak, players allocate a payday, choose Snowball or Avalanche, and execute repayments in an arcade battle. Debt, interest, required payments and reserves make the consequences visible.

Help test one clear question.

After a guided session, can learners better identify what remains, what protects them and what they owe? The proposed pilot invites 20 adult learners for a 30-minute fictional-money session, with before/after scenario questions and usability feedback.

Proposed support: \$1,000. Participant thank-yous \$400; accessibility/usability review \$250; hosting and browser testing \$200; learning materials \$150. Target: 8 weeks after funding, subject to recruitment. Development time is contributed.

Seeking educators, community hosts, adult beta testers and practical support. This is a working prototype seeking evaluation; learning outcomes and partner participation are not yet established.
